

Sustainability and Climate Change

Education plays a vital role in:

- helping to tackle climate change
- creating a better, greener world for future generations

We can positively impact, influence and inspire communities by improving the:

- sustainability of the environment in and around our school
- knowledge and understanding of our children

Our strategy includes the following key action areas:

- climate education
- green skills and careers
- the education estate and digital infrastructure
- operations and supply chains
- international action

Our strategic aims:

1. Excellence in education and skills for a changing world: preparing all young people for a world impacted by climate change through learning and practical experience.
2. Net zero: reducing direct and indirect emissions from education and care buildings, driving innovation to meet legislative targets and providing opportunities for children and young people to engage practically in the transition to net zero.
3. Resilient to climate change: adapting our education and care buildings and system to prepare for the effects of climate change.
4. A better environment for future generations: enhancing biodiversity, improving air quality and increasing access to, and connection with, nature in and around our school.
